WisConomy LMI Web Application

April 02, 2019

The Department of Workforce Development recently developed WisConomy, a new product/service that improves the way Labor Market Information (LMI) is shared and accessed. WisConomy is a new LMI web application that helps users with different experience levels explore, share, and analyze LMI data with its interactive tools. Users can access an integrated data query that can create LMI datasets; Tableau dashboards can be customized, saved, and shared; and career exploration tools can be accessed. WisConomy provides the ability for users to create an account allowing them to save their queries and dashboards. Users can also share them through multiple formats including email. WisConomy makes LMI data more accessible and easier to understand for job seekers and connects them to career exploration tools like DWD's Skill Explorer. WisConomy can be found at WisConomy.com.
